

CortexMetrics

Monitor all your Gatekeepers and Cortex devices

Performance metrics
Alarms and notifications
All devices in one dashboard

PERFORMANCE MONITOR

The AVUTECH performance dashboard is an online monitoring service, informing installers or system managers about the status of all their installed Gatekeepers and Cortex devices. With this monitoring platform, technical incidents can be tracked down and proactively solved before it becomes an issue to the user.

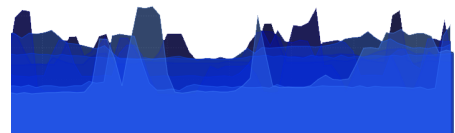

Performance metrics

CortexMetrics displays a wide variety of metrics containing information about network usage, CPU and GPU performance, memory status, recognition rates & confidence and uptime.

It is a powerful platform to diagnose problems, manage all installed devices and offer high quality customer support.

Alerts and alarms

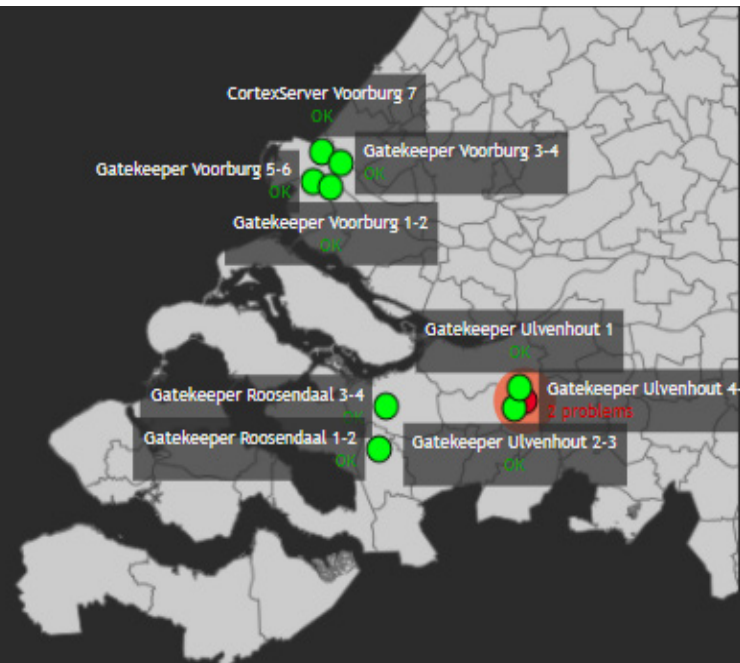

Not only provides CortexMetrics a graphical interface to observe all devices and their metrics, it also allows to automate device monitoring by setting alarms and notifications.

Predefined events generate messages send via email or sms to inform system managers and installers of anomalies and technical problems.

All devices in one dashboard

No separate logins or switching between devices. An overview map of all devices provides a quick scan to locate a device with technical problems. More detailed information per device to diagnose problems is just a few clicks away.

Scalable and flexible as it is, the dashboard will change in accordance with the amount of installed devices. Performance metrics, alerts and alarms can be altered over time when requirements or conditions change.

For more information about the performance and operational dashboard or a demonstration account, please contact our salesteam at +31 88 2444 010 or sales@avutech.com
